Abstract (en)

[origin: EP2474680A1] The device (1) has an attachment profile (2) fixed on a roof ridge, and a base extending parallel to a roof plane and fixed over the ridge. A vertical wing longitudinally extends from the base with respect to the base, and forms an angle with the base. The wing extends in a vertical manner, and is perpendicular to the plane. A set of ridge elements (3, 3', 3'') made of earthenware has an attachment unit (4) on an upper edge (32) to cooperate with the wing and a fitting unit (5) cooperating with a complementary fitting unit including the adjacent element and/or the profile.
