Abstract (en)

Header cover (10), in particular for heat exchangers of automotive vehicles, comprising a vault (11) and a fluid input and/or output nozzle opening out into the header cover through a side (12) of said vault. The header cover is configured for conveying a fluid to or from a plurality of tubes (32) of circulation of a heat exchanger core (30). The vault of the header cover is configured to open out on the heat exchanger core. The header cover comprises a plurality of deflectors (15) superimposed on one side (14) of the vault, opposite to the opening of the nozzle, in an axis defining an angle with a plane (18) defined by an opening of the vault on the heat exchanger core.
