Abstract (en)

[origin: WO2012025463A1] The invention relates to a protective helmet, in particular for sports, in particular a bicycle helmet, ski helmet or the like, having at least one rear lighting unit (30), said helmet comprising at least one opening (12) on the rear outer side thereof for receiving the rear lighting unit (30). A mounting device (20) releasably holding the rear lighting unit (30) is disposed in the opening (12). The mounting device (20) is designed as a backwards mounting element for a strap for attaching the protective helmet (10) to the head of the wearer. The mounting device (20) in particular comprises attaching means (24, 24) by means of which said device is attached in the body of the protective helmet (10). The mounting device (20) is designed as a counter support for the strap, such that when the strap is subject to tensile loading, energy arising in the mounting device (20) is absorbed in the body of the protective helmet (10).
