Abstract (en)
[origin: WO2011029749A1] A structural protection system of buildings is described, comprising at least one bearing structure (2) connected with at least one wall of said building (E). The bearing structure (2) is rigidly connected to the wall of the building (E) and the bearing structure (2) is a specialized structure comprising an energy dissipation device (1) adapted to dissipate the energy generated by the oscillations of the bearing structure due to earth tremor.
