Abstract (en)
[origin: WO2011029653A1] The invention relates to a method for producing a sensor (110), in particular for detecting rotational speed, wherein at least one punch grid (120) for electrically contacting the sensor (110), in particular a sensor element of the sensor (110), is provided. Furthermore, at least one homogenization disc (112) for influencing a magnetic field is provided, wherein the punch grid (120) and the homogenization disc (112) are connected by way of at least one holder (122). The holder (122) fixes the punch grid (120) and the homogenization disc (112) in a positive and/or bonded manner.
