Abstract (en)

[origin: WO2011027041A1] The invention relates to spectacles comprising a surface (1) connected to at least one side arm (2) via a lug (3) and an associated hinge (4), said arm (2) being movable relative to the lug (3) between an open position and a closed position and comprising a frame (5) and at least one decorative sleeve (6) that is rotatably mounted about said frame (5), characterized in that the lug (3) is shaped and arranged relative to said sleeve (6) so as to prevent the rotation of the sleeve (6) about the frame (5) when the arm (2) is in the open position. The present invention can be used in the field of spectacles.
