Abstract (en)
[origin: EP2476335A1] The jewelry has two annular side bodies (3, 4) whose diameters are greater than a diameter of an annular central body (2). One of the side bodies is assembled with the central body in a removable manner for positioning and removing annular decorative elements (6, 8, 9). A magnetic locking unit i.e. tooth, retains the side bodies on the central body in an assembled position defined by another locking unit between the side and central bodies, along a degree of freedom. The latter locking unit is formed of a projecting unit i.e. fillet (16), a projecting portion (14) and a groove (10) provided with an open portion (11) and a closed portion (12).
