Abstract (en)
[origin: EP2476492A1] The system (1) has a main cleaning stage (2) and a pretreatment stage (3) working with heated treatment fluids. The stages are attached to a block-unit heating power plant (4) for supply with heat energy via a common heat circuit (5) with forward and return lines (5a, 5b). The pretreatment stage is attached after the main cleaning stage in the return line and operated as a return condenser. Heat exchangers (6, 8) supply the heat energy to the main cleaning stage and the pretreatment stage, respectively. A bypass line (10) of one of the heat exchangers (8) is provided in the heat circuit.
