Abstract (en)
[origin: EP2476559A2] The sheath has a clamping element (22) whose clamping section (32) is arranged on or over an inner side of a rear cover turned towards a front cover. A base section (30) and the clamping section are movable against each other for enlarging a gap (38) against elastic reset force. The element is movably fastened to the covers and movable in a release position in which the clamping section is partially withdrawn from the rear cover. The element has a middle area (52) reinforced opposite to end areas (50) in a longitudinal direction running parallel to a side edge of the rear cover.
