Abstract (en)
[origin: EP2476827A1] The locking device (10) has a latch bolt (14) provided with a latch shaft (20) and a locking element that transfers the bolt from a closing position into a locking position. A blocking element (22) is provided in a lock case (12) for blocking displacement of the bolt. The bolt includes a clamping element to which the blocking element is engaged. The blocking element is led from a path of the clamping element using an auxiliary latch (16). The clamping element is formed from a pin protruded transverse to respective displacing directions of the bolt and the blocking element.
