Abstract (en)

[origin: EP2476829A2] The lifting/sliding structure has fixed frame (1) comprising casement (2) provided between a closed and open position in slidable state. The casement is liftable between first stroke position and second stroke position and is received in the frame. The frames are connected to a first locking element (4) and second locking element (5). The locking elements are adapted to limit the lifting movement in the closed position of the casement at stroke path between the first stroke position and the second stroke position.
