Abstract (en)  
[origin: EP2476975A2] The heat transfer apparatus has a capacitor (102) for condensing a refrigerant, a flow channel for passing the refrigerant and another flow channel for conducting fluid. The flow channels are arranged, so that heat energy transfer between the refrigerant and fluid is enabled. A volume element (104) e.g. battery for storing the refrigerant in fluid state, is connected to flow channel for passing refrigerant, and is integrally connected to the capacitor.
