Abstract (en)  
[origin: WO2011034416A1] A bed system (1) comprises a lying frame (2) and an undercarrier (4) for supporting the lying frame while the undercarrier is resting on a floor. The lying frame comprises at least one first connector (5) and the undercarrier (4) comprises at least one second connector (6, 7), via which the lying frame and the undercarrier are releasably fixable to one another. The lying frame may be slid off from the undercarrier in a sliding direction (S) which is substantially parallel to the lying surface (3) of the lying frame and transverse to the longitudinal direction (L) of the lying frame. At the same time, the lying frame is slid onto another such undercarrier (24) situated alongside said undercarrier (4) and which comprises another such at least one second connector (26, 27).
