Abstract (en)

[origin: WO2011032985A1] A game device (1) comprises a ball (2) and twelve indicators (3). Each indicator (3) comprises a suction cavity (4) and a release ring (5). Each indicator (3) may be releasably attached by suction to the ball (2) by manipulating the suction cavity (4) of the indicator (3) to create a suction force between the indicator (3) and the ball (2). The release ring (5) protrudes from the ball (2) substantially perpendicular to an external surface of the ball (2). Upon an impact to the release ring (5), for example a user kicking the device (1), the release ring (5) acts to release the suction attachment force between the indicator (3) and the ball (2). The indicator (3) thus becomes detached from the ball (2). By detaching the indicator (3) from the ball (2), the indicator (3) acts to indicate the region of the impact to the game device (1).
