Abstract (en)

[origin: WO2011033212A1] The invention relates to a mail-sorting machine with a device for recirculating items including a cleated belt. The mail-sorting machine includes sorting outlets in which the mail items build up, said sorting outlets being aligned in a certain longitudinal direction. The machine also includes a device for recirculating mail items stored in the sorting outlets, said device including a belt (40) which is movable along the sorting outlets and to which cleats (41, 42) are attached so as to define a series of pigeonholes (4a, 4b, 4c) that face the sorting outlets, each pigeonhole being arranged for on-edge storage of mail items from a corresponding sorting outlet.
