Abstract (en)

[origin: WO2011033326A1] The invention relates to an auxiliary device for clothes lines for improving the drying time of laundry hung on the clothes line, comprising a groove for receiving the clothes line and constituent pieces adapted for keeping the parallelly hanging stretches of drying clothes at a predetermined distance from each other. The auxiliary device according to the invention is characterised by that it has a regular or irregular polygonal, circular or elliptic prism shaped body constituted by two constituent pieces, each constituent piece having a groove for receiving the clothes line.
