Abstract (en)
[origin: WO2011032739A1] The invention relates to a strike plate arrangement (1) for doors, comprising a base element (2) and a change-over fitting (3) that can be assembled therewith and which can be brought by rotation and/or turning into variable positions on the base element (2), wherein the base element (2) and the change-over fitting (3) are provided with a first through-opening (5) for receiving a lock latch and a second through-opening (6) for receiving a deadbolt, and a plurality of screw-receiving portions (7-10). In order to make possible a reliable assembly and inexpensive manufacture, according to the invention there is a top element (4), which covers the base element (2) and the change-over fitting (3) at the front face (2a, 3a) thereof, wherein the top element (4) has further through-openings (5c, 6c) that at least in sections align with the through-openings (5a, 5b, 6a, 6b) of the base element (2) and the change-over fitting (3), and also at least one further screw-receiving portion (11, 12, 13), which at least in sections aligns with at least one screw-receiving portion (7-10) of the base element (2) and the change-over fitting (3).
