Abstract (en)
[origin: WO2011032855A1] The invention relates to an output system (100) for extraction and/or output of a plurality of masses (220), comprising a cylinder unit (300) consisting of at least two double-acting cylinders (301, 304) each having a piston (303) that can be moved by a piston rod (302, 305) for extracting and/or outputting one of the masses (220) at a time, wherein the piston rods (302, 305) are arranged parallel to one another and are interconnected via at least one connecting element (307) such that the connected piston rods (302, 305) can be moved as a unit. The control system also has a control unit (200) comprising at least two valves (201, 204) for controlling the supply and return of the masses (220) to the cylinders (301, 304).
