Abstract (en)

[origin: EP2309146A1] A disk brake pad (11) comprising a supporting base (13) with which a layer (15) of friction material is associated, wherein a wall (19) of said supporting base having associated therewith the layer of friction material is passed through by at least one channel (21, 23, 41) communicating with a chamber (17a), defined in correspondence of the supporting base, for collecting the powders produced due to the wear of the friction material, in order to reduce the primary pollution.
