Abstract (en)

[origin: WO2011033013A1] The invention relates to a medical device (112) for performing at least one medical function, particularly a medical device (112) implemented as a handheld device (112). The medical device (112) is set up for interacting with at least one medical consumable item (122) for performing the medical function. The medical device (112) comprises at least one code reader (142) for reading out at least one information of an optical code (138) of the medical consumable item (122). The code reader (142) comprises at least one image sensor (156). The code reader (142) further comprises at least one flat light source (161) set up for transmissively illuminating the optical code (138).
