Abstract (en)

[origin: DE102009029616A1] The system has a person-machine-filter for verifying whether a telephone connection produced with objective telephone number is responded by persons or a machine. A controlling module is activated by a coupling module on the basis of information contained in the system or information entered into the system. The telephone connection between one of the persons and system and telephone connection between the system and another person is coupled by the coupling module such that the conversation takes place between the persons. Independent claims are also included for the following: (1) a computer program product for implementation in a communication device, comprising an input module (2) a method for automatically producing a contact between a finder of an object provided with a code and an owner of the object.
