Abstract (en)

A device for adjusting the position of the bootleg (4) with respect to the shell (2), particularly for ski boots (1). The first end (7) of a blade (6) is associated internally and at the rear with respect to the bootleg (4), the blade (6) interacting selectively, at the second end (13), with a tooth (16) of a slider (17). The latter is arranged adjacent to the heel (11) and movable axially with respect to the shell (2) in contrast to an elastically deformable element (29).
