Abstract (en)  
An ice skate blade assembly (10) comprising: (a) an ice skate blade (12) comprising first and second ends (16, 18), an ice contacting surface (20) and an upper edge (22) opposed to the ice contacting surface, the upper edge comprising first and second hooks (24, 26) projecting upwardly proximate to one of the first and second ends respectively, the second hook (26) having an upper surface (26A), an end (26B) and a bottom surface (26C); (b) a blade holder (14) having first and second pedestals (30, 32) and a bottom portion (38) having a longitudinal groove (40) extending therealong for receiving the upper edge of the ice skate blade and wherein the bottom portion further defines a recess (68) extending upwardly from the longitudinal groove for receiving the first hook and wherein the second pedestal has an inner surface (52) defining a cavity (54) with a bottom aperture (56) opens to the longitudinal groove; and (c) a single actuator (72) at least partially mounted within the cavity, the single actuator having a wall (74) accessible by a finger of a user, a resilient portion (76) having an end wall (78) facing a section of the inner surface of the second pedestal and a base (80) with an inner wall (83) and a bottom wall (84) having an upper surface (84), an end (84B) and a bottom surface (84C), wherein the inner wall and the bottom wall define therebetween a channel (82) opens to the bottom aperture (56) for receiving the second hook (26).
