Abstract (en)

[origin: EP2479105A1] The rescue-suit i.e. body suit (1), has a rising cover (20) surrounding a respiration chamber, and a hose provided with a free end for connection to a supply-unit of breathing gas. The breathing gas is supplied to the respiration chamber and an inflatable rising chamber (19) through the hose for creation of a rising lift. A gas-distributor is arranged at another end of the hose, and directly stands in connection with the respiration- and inflatable rising chambers over respective gas outlets. Non return valves are arranged in the respective gas outlets. An independent claim is also included for a method for rescuing a submarine-rider from a submarine located in deep water.
