Abstract (en)  
[origin: EP2479846A2] The contact device comprises ring shaped elements (31,32), and an internal recess that is formed for receiving a conductor (21) and an outer contour for inclusion in a hollow cylindrical conductor (22). The inner rotating contact elements (4) are protruded from the ring shaped elements in a direction perpendicular to that of the ring shaped elements. The recess is formed for receiving the contact elements of the ring shaped elements. The ring shaped elements are constructed identically.
