Abstract (en)
[origin: WO2011035954A1] The present invention relates to an electric tool (1), comprising a striking mechanism assembly (3), which can be driven in and against a striking direction (4) in a cyclic manner, and a counter-oscillator (5) for compensating for vibrations of the electric tool (1), in particular of housing oscillations, comprising a balancing mass (2), wherein the balancing mass (2) can be driven in a movement direction (6) by driving the striking mechanism assembly (3), wherein the movement direction (6) extends at an angle to the striking direction (4).
