Abstract (en)
[origin: CA2774898A1] The invention relates to a method for operating a coke oven arrangement, wherein the coke oven gas accumulated during the coking process is fed as a useful gas to a material recovery system. According to the invention, a synthetic gas is fed as a fuel gas for the preparation of at least one part of the thermal energy needed for the coking process, said synthetic gas being produced by means of a process for the gasification of a fossil fuel, preferably coal.
