Abstract (en)

The rolling die (1) comprises multiple grooves (10), which have two flanks in cross section. A portion of the grooves comprises a deformation area, in which the measurement of a profile angle that is enclosed by one of the flanks steadily decreases along the grooves. The pitch angle (omega) between the grooves and the rolling die longitudinal axis (5) in the deformation area varies along the grooves. An independent claim is also included for a method for forming a screw thread on a screw blank.

Abstract (de)

Die Erfindung betrifft eine Walzbacke zum Formen eines Schraubgewindes an einem Schraubenrohling, mit einer Vielzahl von Nuten (10), wobei die Nuten (10) im Querschnitt jeweils zwei Flanken (11;12) aufweisen. Erfindungsgemäß ist vorgesehen, dass zumindest ein Teil der Nuten (10) einen Umformbereich aufweist, in dem die Grösse eines von den Flanken (11;12) eingeschlossenen Profilwinkels (\pm) längs der Nuten stetig abnimmt.
