Abstract (en)

[origin: EP2481566A1] The method involves using tuber (1), ground planter (50), palletizer (70), and storage and transport devices (28,66) for conveying processes of sacks. The production data of the machines and parameters of the production orders of sacks, are transmitted by a control unit. The production order of sacks is determined based on forecast, recommendation and/or control commands. The manufacturing data parameters and/or scope of the production results and parameters and/or scope of cover stock levels, are stored. An independent claim is included for system for executing application for production of sack.
