Abstract (en)

The device (10) has a mailpiece-receiving deck (12) including a longitudinal edge on which a referencing wall (16) is extended. The deck is traversed by a conveyor belt (14) for conveying mailpieces along the wall toward a sloping accumulation surface against which the mailpieces are accumulated. A shock-absorber wedge (30) is arranged at an angle formed by the deck and the wall, and is hit by the mailpieces after the mailpieces are ejected from a mail-handling machine, and before the mailpieces fall back down onto the belt so as to be conveyed toward the surface.

Abstract (fr)

Dispositif de stockage (10) pour machine de traitement de courrier comportant un plateau de réception (12) sur un bord longitudinal duquel s'étend une paroi de mise en référence (16), le plateau de réception étant traversé par une courroie de transport (14) pour convoyer des articles de courrier le long de cette paroi de mise en référence, et un tremplin amortisseur (30) monté contre la paroi de mise en référence et sur lequel les articles de courrier vont impacter après leur éjection de la machine de traitement de courrier avant de retomber sur la courroie de transport pour leur convoyage vers le plan incliné.
