Abstract (en)

[origin: EP2481863A2] The panel (1) has opposite combinable edges (4, 5) assembled with abutting edges of other two successive panels (1A, 1B). A horizontal internal groove (6) traverses through-and-through an insulated board (2), and is formed in the insulating board behind a finishing board (3). The groove receives a U or V shaped self-aligning chute (7) to cooperate with corresponding groove of the other successive panels. Extremity edges of the chute are rounded to facilitate its introduction on sides of the latter groove.
