Abstract (en)

[origin: EP2482385A1] The apparatus has a storage facade (2) including upper and lower rows of holes (11) for receiving teeth (17), where the upper row of holes accommodates phase type teeth and the lower row of holes accommodates neutral type teeth. The upper row of holes comprises a connection unit connected to terminals, and the lower row of holes maintains a bridging comb (18) in a connection position by a spring unit located inside the holes. A flexible spring blade (13) clamps the teeth after introduction into the holes.
