Abstract (en)
[origin: WO2011035359A2] The invention relates to a brush, in particular a toothbrush, comprising an upper part (1) and a lower part (2), which are connected to each other by means of a joint (3). A storage chamber (6) for a liquid or pasty substance, in particular toothpaste, is arranged in the lower part (2), and a brush head (4) is arranged on the upper part (1). A channel (11) extends between the storage chamber (6) and the brush head (4). The channel comprises a through-passage from the storage chamber (6) to the brush head (4). The upper part (1) and the lower part (2) comprise flexurally stiff wall sections (16, 17), which are connected to each other by means of the joint (3). An elastic wall section (13) is arranged between the flexurally stiff wall sections (16, 17). The elastic wall section forms a wall section (13) of the supply chamber (6).
