Abstract (en)

[origin: WO2011040815A1] A guard device (10, 20) for an intravenous body (51) for use around a percutaneous infusion port (50) in a peripheral body part comprises a hollow, substantially form-retaining guard body (10) which is open on at least one side and which is intended and adapted to receive the intravenous body thereunder. The guard body (10) is fixable relative to the body part and for this purpose is connected releasably (14, 24, 33) to a rigid splint body (20) intended and adapted to receive the body part thereon on a side remote from the infusion port. Primary fixation means (31, 32) are provided to fix the body part on the splint body (20).
