Abstract (en)

[origin: WO2011038434A2] The invention relates to a device (1) for bridging an expansion joint (2) in the region of a carriageway, said device comprising a superstructure (5) and a substructure (6), the superstructure (5) comprising at least one elastic element (15) and the substructure (6) forming a support for the superstructure (5). At least one holding element (19, 20) that is at least partially embedded in the elastic element is arranged in the superstructure (5).
