Abstract (en)

[origin: WO2011039186A1] The invention relates to a condenser (10, 20) to be used in an air-conditioning circuit of an automobile, including punched plates (20) stacked in a longitudinal direction and defining first blades for the circulation of a first fluid as well as second blades for the circulation of a second fluid, said second blades being interleaved with the first blades, said condenser enabling the alternating circulation of the first fluid. According to the invention, said condenser includes inlet tubing (28) for the first fluid and outlet tubing (30) for the first fluid provided on a single first end surface (24) of said stack.
