Abstract (en)

[origin: WO2011039169A1] The invention relates to a system for determining exhaust gas volume for a stationary or mobile device, especially a boat, comprising: a plurality of Bragg gratings (5) distributed in pre-determined positions transversely to the direction (4) of flow of an exhaust gas in an exhaust gas channel (2) of the device; an optical wave guide structure (6) that consists of at least one optical wave guide (7) and in which the Bragg gratings (5) are embodied; a heating device (9) arranged adjacently to the Bragg gratings (5) and through which the Bragg gratings (5) are subjected to heat, or a cooling device arranged adjacently to the Bragg gratings, through which the Bragg gratings (5) can be subjected to cold; at least one light source (22) for irradiating light into the optical wave guide structure (6); and at least one signal processing device (23) which determines, from light backscattered from Bragg gratings (5) in the optical wave guide structure (6) against its original direction of diffusion, the speed of the flow of the exhaust gas along the course of the optical wave guide structure (6), and thereby deduces the exhaust gas volume flowing through the exhaust gas channel (2).
