Abstract (en)

[origin: WO2011039471A2] The invention relates to a method for the remote control of a device to be controlled, which uses a command processing module and comprises: a step consisting in implementing, on the control device, a remote control application which, following the detection of at least one interaction between a user and a user interface associated with said application, invokes, via a network, at least one action of a command reception service; and a step consisting in implementing, on the device to be controlled, a command reception service which executes the actions invoked via a network by a remote control application and which sends the command processing module command codes representing interactions between a user and a user interface associated with the remote control application.
