Abstract (en)

[origin: WO2011038973A2] The invention relates to an assembly (1) for installing building systems engineering units having a housing (3), which comprises a control device (4) for carrying out an electronic function, and a base module (2) which is designed for fastening the housing (3) for a pre-determined installation situation. The housing (3) and the base module (2) are designed for fixed but removable connection so that the housing (3) can be connected to a base module (2) adapted to the respective installation situation in dependence on the installation situation. The modular sub-division of an installation unit into a base module (2) and a housing (2), which comprises the control device (4) for carrying out a defined function, can significantly reduce the diversity of variants.
