Abstract (en)

[origin: JP2012122182A] PROBLEM TO BE SOLVED: To provide an improved method for designing a textile product to be manufactured by a knitting machine so as to allow further fast input and simultaneous defect watching.SOLUTION: A method of designing a textile product to be manufactured by a knitting machine is provided. In a display device displaying a figure (1) of a pattern of a textile product as a compressed symbol display, the method implements a simulation of a fabric (2) to be made for at least one area of the figure of the pattern in the process of editing the displayed figure of the pattern. The simulation of the fabric and the figure of the pattern are simultaneously displayed in the display device.
