Abstract (en)

A method for conducting a game of chance includes defining a number of play indicia to be randomly generated from a defined field of play indicia, wherein each play indicia in the field has a unique value. Game entries are received from players and include a range within which the player predicts a cumulative value of the randomly generate play indicia will fall. The play indicia are randomly generated and a cumulative value of the set of randomly generated play indicia is determined. Wins are determined for player game entries if the cumulative value of the set of play indicia falls within the range of a respective player game entry. A prize is awarded for winning game entries that are determined as a function of the odds of the cumulative value of the set of play indicia falling within the range of the player game entry.
