Abstract (en)

[origin: EP2485224A2] The holder (80) has a U-shaped insulation base module having front flat outer side and two side edges. The base module includes connecting devices at ends of the holder and an inverse circular segment (92) for a shield pipe (100) in a middle region. The base module is bent for multiple times along an extension between the ends, so that a creepage path extension is produced. Multiple slots are formed transverse to the elongate extension of the base module. The slots run at the outer side and the side edges in a plane. An independent claim is also included for an oil transformer.
