Abstract (en)
[origin: WO2011032568A1] The invention relates to a container arrangement, comprising a box- or shell-shaped lower container part (2), which comprises a container bottom (4) and at least one peripheral container wall (5) at the edge of the container bottom (4), and a container lid (3), which is designed to close the lower container part (2) in order to bound a spatial volume by means of the lower container part (2). According to the invention, an accommodating shaft (15, 16, 17, 18) for accommodating an information carrying card (19) designed in the check card format is designed on an outer surface of the lower container part (2) and/or of the container lid (3), wherein the accommodating shaft (15, 16, 17, 18) has guiding means (20) for temporarily fixing the information carrying card (19) and a viewing window that is designed in such a way that a card surface (21) of an information carrying card (19) inserted in the accommodating shaft (15, 16, 17, 18) facing the outer surface of the lower container part (2) or of the container lid (3) can be viewed from the outside.
