Abstract (en)

[origin: WO2011042670A1] The invention relates to a device (160) for controlling a gear motor (103) of a system (100) for wiping a window of an automobile, the gear motor including a first winding causing the gear motor to rotate at a first speed when the latter is powered and a second winding causing the gear motor to rotate at a second speed when the latter is powered. The device comprises a control member (102) for powering either the first winding or the second winding and is characterised in that the control device at all times includes a controlled switch (104) and a selector (106) of the control member arranged in series on the power supply line to the first and second windings.
