Abstract (en)

[origin: WO2011042630A1] The invention relates to a device (1) for adjusting the position between a front fender (2) and a windshield post (3), said device being characterized in that it comprises a chassis (10) and the following means: a means (41) for holding the chassis (10) onto the front fender (2) and onto the post (3); a means for centering the chassis (10) on the front fender (2) and on the post (3); and an adjustment means (80) that is connected to the chassis (10) and suitable for exerting a force on the front fender (2) and on the post (3), respectively, so as to adjust the relative position between said front fender (2) and said post (3). The present invention can be used in the automotive field.
