Abstract (en)  
[origin: WO2011042138A1] The invention relates to food packaging (1), in particular for milk products, having at least four geometrically identical containers (2) arranged adjacent to one another in a circumferential direction, wherein two containers (2) each that are arranged adjacent in the circumferential direction are interconnected in a separable manner via a material weakening line (3), and wherein the material weakening lines (3) are arranged such that they taper toward a center (4), and wherein each container (2) has two side walls (6, 7) arranged at an angle to one another and a floor (5). According to the invention, each container (2) has a single rear wall (8) that connects the side walls (6, 7) to each other, or a plurality of rear walls (8) each running toward one another at an angle greater than 90°, and a sleeve contour enclosing all rear walls (8) has a circular or polygonal contoured cross-section.
