Abstract (en)
[origin: WO2011043730A1] A storage receptacle comprising at least four side walls and upper connecting means and lower connecting means. The upper connecting means comprises at least one protrusion located at one side wall of the storage receptacle, wherein said at least one protrusion is adapted to protrude over an upper rim of the side wall opposite the side wall having said at least one protrusion of another corresponding storage receptacle. The lower connecting means comprises first engaging means located at the side wall having said at least one protrusion and second engaging means located at the side wall opposite the side wall having said at least one protrusion, wherein said first engaging means of the storage receptacle and said second engaging means of the other corresponding storage receptacle are adapted to engage with each other. Joint lifting of said storage receptacle and the other corresponding storage receptacle by lifting in any of said storage receptacle and the other corresponding storage receptacle is enabled. A storage receptacle system comprising at least two storage receptacles as described above for joint lifting of said at least two storage receptacles by lifting in any of said at least two storage receptacles.
