Abstract (en)  
[origin: WO2011042476A1] The invention relates to a device for cleaning wastewater comprising contaminants that can be or is installed in a watercraft, having at least one reactor (10) that can be connected to a wastewater tank (6) for intermediately storing the wastewater, in which the wastewater is mixed with gas and enriched, and biodegradation of the contaminants takes place, and at least one separating unit (18) connected to the reactor (10), in which any residual contaminants still present in the wastewater are retained. According to the invention, the reactor (10) is designed for at least partially installing in the wastewater tank (6) and substantially forms an independent unit, closed against the surrounding interior of the wastewater tank (6).
