Abstract (en)
[origin: WO2011043715A1] An improved method and system for establishing a connection between a vehicle and a data base is disclosed. The connection is to be used for transfer of tachograph related information. According to the present invention, the connection is established by utilizing a vehicle identity information for determining a user account in a tachograph service entity to be used for transfer of connection establishment information, wherein the user account is accessible by a remote user entity. Then, at least the connection establishment information is made available on the user account. Further, after the connection has been established, the transfer of the tachograph related information is transferred to a data base via the tachograph service entity.
