Abstract (en)

[origin: WO2011041820A1] An interface having two external connections for receiving time-discrete signals (ZT) via an input connection or analogue signals (AI) via a further input connection, wherein the two signals are transmitted via at least one existing galvanic isolation (G1, G2, G3), wherein the interface is designed additionally for the connection of a sensor on that side of at least one galvanic isolation (G3) which is remote from the external connections.
